

Annual Input-Output Accounts of the U.S. Economy, 1998

By Mark A. Planting and Peter D. Kuhbach

THIS month, the Bureau of Economic Analysis released the 1998 annual input-output (I-O) accounts for the U.S. economy. These accounts are the third in a series of annual I-O accounts that have been prepared to improve the timeliness of the accounts: The lag between the year of measurement and the year of release has been reduced from 5 years to 3 years.

The annual I-O accounts show the flow of 97 commodities—goods and services—among 94 industries and to final uses. Final uses consist of personal consumption expenditures (PCE), gross private domestic investment, change in private inventories, exports, imports, and government consumption expenditures and gross investment. The sum of all final uses is, by definition, equal to gross domestic product (GDP). In addition, the accounts show, by industry, the contributions made by primary inputs (mainly labor and capital) to total output. By definition, these contributions, called “value-added,” also sum to GDP.

The annual I-O accounts extend and supplement the quinquennial benchmark I-O accounts, the annual GDP-by-industry accounts, and the GDP estimates. Using various indicators to extrapolate both commodity output and industry output, the accounts provide a more up-to-date picture of interindustry interactions than the benchmark I-O tables. The accounts supplement the annual GDP-by-industry estimates by providing information on industry purchases and sales that are not found in the GDP-by-industry estimates of gross output, intermediate inputs, and value added. The annual I-O accounts also provide industry information that supplements the product information contained in the GDP estimates.

The I-O accounts map the structure of production and distribution economy wide. These accounts can be used to analyze changes in the composition of GDP and the effects of these changes on different parts of the economy. For example, the industry relationships from the 1998

accounts could be used to estimate the effects of the attacks of September 11th on tourism (including hotels and air transportation) and its supplying industries or the effects of the recent increases in defense spending on a broad range of industries.

The year 1998 was the seventh year of the 9-year economic expansion of the 1990s. While consumer spending was important in sustaining the long expansion, high levels of investment, especially investment in high-tech equipment and services—computers, communication equipment, and software—played a central role. The long-term shift in the composition of U.S. output from traditional goods to services continued in the 1990s.

For assessing structural changes in the economy, the I-O estimates provide industry and product information, such as purchases of intermediate goods and services, that are not available in the final demand estimates included in GDP. Structural changes highlighted by the 1998 annual I-O accounts include the following:

- Intermediate consumption of business services—which are frequently associated with outsourcing—grew more than 12 percent in 1998, almost five times faster than intermediate consumption of all other commodities.
- Consumer spending on services grew more rapidly than consumer spending on goods in 1992–98, but the spending on goods has larger backward linkages to the rest of the economy.
- Most goods have backward linkages that exceed 2.0, indicating that a \$1 increase in final demand for goods results in at least another \$1 of demand for goods and services from the supplying industries. For example, passenger cars and trucks have a backward linkage of 2.82, indicating that a \$1 increase in final demand will result in a \$1.82 increase in the demand for goods and services from all the other industries.
- Most services have linkages that are less than

2.0. For example, finance has a linkage of 1.72, indicating that a \$1 increase in final demand results in only a \$0.72 increase in the demand for goods and services from all the other industries.

• The demand for investment commodities grew faster than overall consumer spending (either for goods or services) in 1992–98. Moreover, the backward linkages on investment commodities tend to be larger than those for consumer spending.

The 1998 I-O accounts are based on the 1992 benchmark I-O accounts and are prepared using 1998 estimates of industry and commodity output and the 1998 estimates of GDP from last summer's annual revision of the national income and product accounts (NIPAs).¹ The estimates of industry and commodity output are based on Census Bureau annual survey data and other annual sources.

1. For an overview of the I-O accounts, see Ann M. Lawson, "Benchmark Input-Output Accounts for the U.S. Economy, 1992: Make, Use, and Supplementary Tables," *SURVEY OF CURRENT BUSINESS* 77 (November 1997): 36–82; and "Benchmark Input-Output Accounts for the U.S. Economy, 1992: Requirements Tables," *SURVEY* 77 (December 1997): 22–47. For a description of the methodology for the annual I-O accounts, see Sumiye Okubo, Ann M. Lawson, and Mark A. Planting, "Annual Input-Output Accounts of the U.S. Economy, 1996," *SURVEY* 80 (January 2000): 37–86. For information on the NIPA revision, see Brent R. Moulton, Eugene P. Seskin, and David F. Sullivan, "Annual Revision of the National Income and Product Accounts," *SURVEY* 80 (August 2001): 7–120.

Estimates of the intermediate and final consumption of commodities are based on relationships from the 1992 benchmark I-O accounts. These relationships are allowed to adjust to maintain consistency with the 1998 data.

The 1998 annual I-O tables

The 1998 annual I-O accounts consist of 94 industries, 97 commodities, and 11 categories of final demand.² Two make tables, one that is based on I-O industry classifications (table 1) and an alternative that is based on the Standard Industrial Classification (SIC), show the commodities produced by each industry. Two use tables, one on the I-O basis (table 2) and one on the SIC basis, show the commodities that are consumed by each industry and final demand (table A is an aggregated version of the use table).³

2. The 1992 benchmark I-O accounts consist of 494 industries, 484 commodities, and 40 categories of final demand. The 1997 benchmark accounts are scheduled to be released at the end of 2002. For more information, see the note "Upcoming Changes in the NAICS-Based 1997 Benchmark Input-Output Accounts" in this issue.

3. The make table (table 1), the use table (table 2), and the industry-by-commodity total requirements table (table 5a) in summary format are presented at the end of this article. More detailed versions of all eight tables are available electronically; see the box "Data Availability" on page 50.

Table A.—The Use of Commodities by Industries, 1998
[Millions of dollars]

	Industries ¹										Final uses (GDP)							Total commodity output ³

1. The input-output (I-O) accounts use two classification systems, one for industries and another for commodities, but both systems generally use the same I-O numbers and titles.

2. "Other" consists of government enterprises, general government industry, household industry, and the inventory valuation adjustment.

3. Detail may not sum to totals due to rounding.

4. "Value added" consists of compensation of employees, indirect business tax and nontax liability, and other value added. "Other value added" consists of the following components of gross domestic income: Consumption of fixed capital, net interest, proprietors' income, corporate profits, rental income of persons, business transfer payments, and subsidies less current surplus of government enterprises.

Four requirements tables are derived from the make and use tables: One direct requirements table and three total requirements tables. The total requirements tables show the production that is required, directly and indirectly, to meet purchases from final demand. The industry-by-commodity total requirements table details all the linkages between commodity consumption and industry production. The aggregate effect of these linkages is captured in the column sums of this table and is referred to as “the backward linkage” (table 5a). The backward linkage for a commodity represents the total output required from all industries to supply \$1 of final demand for that commodity.

Changes in the composition of total consumption in 1992–98

The series of I-O accounts can be used to compare the structure of the U.S. economy over time. Changes in the use of commodities by the economy, both for domestic use and for export, are measured by changes in the composition of total consumption (table B). Total consumption is defined as total domestic commodity output plus imports less change in private inventories, and it is equal to the sum of total intermediate use and the four final use sectors (personal consumption expenditures, gross private fixed investment, exports, and government purchases). Total consumption shows the total flow of commodities from domestic and foreign sources through the economy. The consumption of commodities by sector provides indications of where structural changes are occurring (table C).

Total commodity consumption grew 5.0 percent in 1998, somewhat slower than the average annual rate of growth of 6.1 percent over the period 1992–98 (table D). This slower rate of growth reflects a slowdown in the consumption of goods commodities, which grew 2.1 percent in 1998, less than half the average rate of 5.4 percent in 1992–98.⁴ In contrast, services commodities grew 6.7 percent in 1998, about the same as the average

rate of 6.6 percent in 1992–98. The faster growth in the consumption of services commodities further shifted total consumption from goods to services; the services’ share of total consumption rose from 60.9 percent in 1992 to 62.5 percent in 1998. Among the services commodities, the fastest growth in 1998 was in finance, insurance, and real estate (8.7 percent) and services (8.4 percent), both of which grew faster than in 1992–98.

Among the goods commodities, all the major commodity groups grew more slowly in 1998 than in 1992–98. Mining declined much more substantially (–19.2 percent, compared with –0.6 percent), primarily reflecting a decline in crude petroleum and natural gas prices in 1998. Growth in manufacturing commodities slowed substantially (2.7 percent, compared with 5.5 percent).

Table E shows the fastest growing commodities among those that accounted for at least 1 percent of total consumption in 1998. These commodities, which together accounted for 43.5 percent of total consumption, are predominantly services (commodity numbers 65A and above). Among the fastest growing commodities were finance (14.0 percent), computer and data processing services (18.8 percent), and “other business and professional services” (12.9 percent), each of which grew at more than twice the rate of all commodities. Many of these commodities continued to grow in 1998 at about the same rates as in 1992–98. However, the growth rates of several commodities slowed dramatically: Computers and office equipment grew 5.0 percent in 1998, compared with 11.3 percent in 1992–97, and electronic components and accessories grew –3.4 percent, compared with 14.6 percent.

The text continues on page 49.

Acknowledgments

Mark A. Planting supervised the preparation of the 1998 annual input-output estimates. Sumiye Okubo, Associate Director for Industry Accounts, and Ann M. Lawson, Chief of the Industry Economics Division, provided overall guidance. Matthew D. Atkinson, Felicia V. Candela, Emily J. Dozier, Jiemin Guo, Peter D. Kuhbach, Tameka R. Lee, Bobby C. Leung, Greg R. Linder, Sherlene K.S. Lum, Demian J. McGarry, Brian C. Moyer, William H. Nicolls IV, and Robert S. Robinowitz prepared the estimates. Karen J. Horowitz provided valuable assistance.

4. Services’ share of economic activity varies depending on the definitions used. For example, I-O services commodities as a percentage of final uses rose from 72 percent in 1992 to 73 percent in 1998; in contrast, services as a share of GDP declined from 54 percent to 53 percent. The differences in the level are largely attributable to wholesale and retail trade; in the supply-oriented I-O commodity classification system, wholesale-retail trade is considered a service, but from the perspective of final users, these services are included in the value of goods purchased. The difference in the direction of movement was due not only to wholesale-retail trade but also to eating and drinking places and to computer and data processing services, including own-account software, which is treated as services in the I-O commodity classification system but as consumer and investment goods in final demand.

NOTE.—Total consumption is defined as total domestic commodity output plus imports less change in private inventories, and it is equal to the sum of total intermediate use, personal consumption expenditures, gross private fixed investment, exports, and government purchases.

Table D.—Total Consumption Growth Rates and Shares by Major Commodity Group, 1992–98

Commodity	Total consumption			Average annual rate of growth of consumption (percent)		Share of total commodity consumption (percent)	
	1992	1997	1998	1992–98	1997–98	1992	1998
All commodities	11,487,126	15,632,077	16,406,556	6.1	5.0	100.0	100.0
Goods commodities	4,491,907	6,024,667	6,152,131	5.4	2.1	39.1	37.5
Agriculture, forestry, and fisheries	245,345	314,319	302,706	3.6	-3.7	2.1	1.8
Mining	191,196	227,987	184,258	-0.6	-19.2	1.7	1.1

60	Aircraft and parts	20,045	1.4	6.6	44.8	1.978
62	Scientific and controlling instruments	59,230	4.0	5.2	8.4	1.874
69A	Wholesale trade	87,088	5.9	10.4	5.9	1.596
69B	Retail trade	25,387	1.7	10.0	6.7	1.557
71B	Real estate and royalties	51,135	3.5	10.3	17.4	1.430
73A	Computer and data processing services, including own-account software	145,416	9.9	14.6	20.8	1.767
73B	Legal, engineering, accounting, and related services	21,552	1.5	5.3	9.8	1.547
	All other commodities	77,636	5.3	8.4	12.1	2.094

NOTE.—The backward linkage for a commodity represents the total output required from all industries to supply \$1 of final demand for that commodity.

Consumption of investment commodities, a component of final demand, increased at an average annual growth rate of 9.5 percent in 1992–98, and it grew 10.4 percent in 1998 (table F). Aircraft grew much faster in 1998, at 44.8 percent, than its average annual growth rate of 6.6 percent in 1992–98 and its 1992–97 rate of 0.2 percent. Real estate and royalties grew 17.4 percent in 1998, compared with 10.3 percent in 1992–98; computer and data processing grew 20.8 percent, compared with 14.6 percent; and new construction grew 11.0 percent, compared with 8.1 percent. In contrast, general industrial machinery declined 0.5 percent in 1998, compared with an average annual growth rate of 7.0 percent in 1992–98; computer and office equipment grew 4.6 percent, compared with 10.9 percent; and motor vehicles (passenger cars and trucks) grew 5.7 percent, compared with 11.6 percent.

Changes in investment demand have a substantial impact on the output of many industries because of the large backward linkages that are typical of capital goods production. Many of the investment commodities have backward linkages that exceed 2.0, indicating that an increase in the demand for these commodities will result in a doubling of production across all industries. For example, in 1998, a \$4.6 billion increase in the demand for audio, video, and communication equipment resulted in a \$10.5 billion increase in production across all industries.

Changes in the intermediate consumption of

commodities—commodities consumed by businesses in order to produce their output—were dominated by continued strong growth in the demand for business services. In 1998, intermediate consumption of these services—which are frequently associated with outsourcing—grew 12.4 percent, almost five times faster than intermediate consumption of all other commodities. Within business services, intermediate consumption of “computer and data processing services, including own-account software” grew 18.4 percent, “other business and professional services, except medical” grew 14.4 percent, and “legal, engineering, accounting, and related services” grew 10.1 percent (table G).

Table G.—Growth Rates for Business Services, 1992–98

Commodity number	Description	1998 Intermediate consumption (millions of dollars)	Average annual rate of growth of consumption (percent)	
			1992–98	1997–98
73A	Computer and data processing services, including own-account software	142,963	19.0	18.4
73B	Legal, engineering, accounting, and related services	269,804	7.1	10.1
73C	Other business and professional services, except medical	518,753	11.4	14.4

Growth in the demand for PCE commodities, a component of final demand, continued at about the same rate in 1998 as in 1992–98. The growth was primarily in services commodities, which account for most of PCE and which generally grow faster than the average for all commodities in PCE (table H). Most commodities grew at approxi-

Table H.—Growth and Composition of Commodities Used for Personal Consumption, 1992–98

Commodity number	Description	1998		Average annual rate of growth of consumption (percent)		1998 Backward linkage
		Consumption (millions of dollars)	Percent of total consumption	1992–98	1997–98

77B	Educational and social services, and membership organizations	325,789	5.6	6.3	8.3	1.812
	All other commodities	784,907	13.4	5.3	4.1	1.881

NOTE.—The backward linkage for a commodity represents the total output required from all industries to supply \$1 of final demand for that commodity.

mately the same rates in 1998 as in 1992–98, but several did not. The growth rate of drugs in 1998, at 15.8 percent, was almost twice the 8.9-percent growth rate in 1992–98, and the growth rate of motor vehicles (passenger cars and trucks) was 6.8 percent, compared with 4.9 percent. In contrast, the growth rate of automotive repair services in 1998, at 5.0 percent, was about half the 9.3-percent growth rate in 1992–98, and the growth rate of insurance was 3.7 percent, compared with 6.1 percent.

The backward linkages for PCE commodities vary; the demand for goods generally has larger linkages, usually greater than 2.0, and the demand for services generally has smaller linkages, usually less than 2.0. In 1992–98, the commodities that grew the fastest—mainly services—tended to have lower backward linkages, so the impact on the other industries of the growth in demand for consumer spending on these commodities was not as

great as the impact of the growth in demand for investment commodities.

Data Availability

The estimates for 94 industries, 97 commodities and 11 categories of final demand at the input-output (I-O) two-digit level—including alternative estimates of the make and use tables on an approximate 1987 Standard Industrial Classification (SIC) basis—and a discussion of the matrix algebra underlying the derivation of the tables are available on BEA's Web site. Go to <www.bea.doc.gov>, click on "Gross product and input-output data," and look under "Input-Output data."

In early 2002, the data from the 1992 benchmark I-O accounts and the 1996, 1997, and 1998 annual I-O accounts will be available interactively on BEA's Web site. Users will be able to select data from any of the published tables.

The I-O two-digit estimates are also available on diskette for \$20—product number NDN-0291. To order, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666).

An appendix and tables 1, 2, and 5a follow.

Appendix.—Classification of Industries in the Annual Input-Output Accounts

[An asterisk preceding a Standard Industrial Classification (SIC) code indicates that the SIC industry is included in more than one I-O industry.]

44+45	Farm, construction, and mining machinery	352, 3531–3	77B	Educational and social services, and membership organizations	6732, 82–4, 86, 8733
46	Materials handling machinery and equipment	3534–7	SPECIAL INDUSTRIES		
47	Metalworking machinery and equipment	354	78	Federal Government enterprises	(1)
48	Special industry machinery and equipment	355	79	State and local government enterprises	(1)
49	General industrial machinery and equipment	356	80	Noncomparable imports	(2)
50	Miscellaneous machinery, except electrical	359	81	Scrap, used and secondhand goods	(3)
51	Computer and office equipment	357	82	General government industry	(4)
52	Service industry machinery	358	83	Rest of the world adjustment to final uses	(5)
53	Electrical industrial equipment and apparatus	361, 362	84	Household industry	(6)
54	Household appliances	363	85	Inventory valuation adjustment	(7)

1. The SIC assigns codes to activities regardless of whether the establishment is owned by private firms or government agency. In the I-O accounts, SIC codes are used only to classify private activities.

2. Noncomparable imports include imported services that are not commercially produced in the United States, and goods and services that are produced abroad and used abroad by U.S. residents for example, U.S. Federal Government defense spending abroad.

3. Scrap is a secondary product of many industries, and used goods are sales and purchases typically between final uses. Industry output is zero because there is no primary producing industry. The sales are shown as negative values in the use table.

4. Industry output is defined as the compensation of employees and consumption of fixed capital of general government agencies. The compensation of employees engaged in construction work is included in construction. The compensation of employees engaged in the production of own-account software is included in computer and data processing services.

5. The commodity entries include adjustments among PCE and government expenditures to eliminate counting the expenditures by foreign residents in both exports and PCE or government expenditures.

6. Industry output is defined as the compensation of domestic household workers.

7. The inventory valuation adjustment removes inventory profits and losses from business income.

Table 1.—The Make of Commodities

[Millions of dollars]

Industry number	For the distribution of industries producing a commodity, read the column for that commodity	Livestock and livestock products	Other agricultural products	Forestry and fishery products	Agricultural, forestry, and fishery services	Metallic ores mining	Coal mining	Crude petroleum and natural gas	Nonmetallic minerals mining	New construction, including own-account construction	Maintenance and repair construction, including own-account construction

Table 2.—The Use of Commodities

[Millions of dollars]

Commodity number	For the distribution of output of a commodity, read the row for that commodity	Plastics and synthetic materials	Drugs	Cleaning and toilet preparations	Paints and allied products	Petroleum refining and related products	Rubber and miscella- neous plastics products	Footwear, leather, and leather products	Glass and glass products	Stone and clay products	Primary iron and steel manu- facturing
	For the composition of inputs to an industry, read the column for that industry										
	Industry number	28	29A	29B	30	31	32	33+34	35	36	37
01	Livestock and livestock products			51							
02	Other agricultural products		188			1

Table 2.—The Use of Commodities

[Millions of dollars at

Commodity number	For the distribution of output of a commodity, read the row for that commodity	Retail trade	Finance	Insurance	Owner-occupied dwellings	Real estate and royalties	Hotels and lodging places	Personal and repair services (except auto)	Computer and data processing services	Legal, engineering, accounting, and related services	Other business and professional services, except medical	Advertising
	For the composition of inputs to an industry, read the column for that industry

Table 5a.—Industry-by-Commodity Total Requirements Backward Linkages, 1998

Commodity number	Description	Backward linkage	Commodity number	Description	Backward linkage
01	Livestock and livestock products	2.958	52	Service industry machinery.....	2.111
02	Other agricultural products	1.983	53	Electrical industrial equipment and apparatus	1.988
03	Forestry and fishery products	2.067	54	Household appliances	2.356
04	Agricultural, forestry, and fishery services	1.759	55	Electric lighting and wiring equipment	1.996
05+06	Metallic ores mining.....	2.226	56	Audio, video, and communication equipment	2.285
07	Coal mining.....	2.013	57	Electronic components and accessories	2.178
08	Crude petroleum and natural gas	2.744	58	Miscellaneous electrical machinery and supplies	2.159
09+10	Nonmetallic minerals mining	1.755	59A	Motor vehicles (passenger cars and trucks)	2.823
11	New construction	2.040	59B	Truck and bus bodies, trailers, and motor vehicles parts	2.474
12	Maintenance and repair construction	2.003	60	Aircraft and parts	1.978
13	Ordinance and accessories	1.833	61	Other transportation equipment	2.087
14	Food and kindred products	2.626	62	Scientific and controlling instruments.....	1.874
15	Tobacco products	1.627	63	Ophthalmic and photographic equipment	1.699
16	Broad and narrow fabrics, yarn and thread mills	2.359	64	Miscellaneous manufacturing	1.957
17	Miscellaneous textile goods and floor coverings.....	2.456	65A	Railroads and related services; passenger ground transportation.....	1.734
18	Apparel.....	2.529	65B	Motor freight transportation and warehousing.....	1.881
19	Miscellaneous fabricated textile products	2.308	65C	Water transportation	2.141
20+21	Lumber and wood products.....	2.295	65D	Air transportation	1.865
22+23	Furniture and fixtures	2.053	65E	Pipelines, freight forwarders, and related services	1.812
24	Paper and allied products, except containers	2.160	66	Communications, except radio and TV	1.777
25	Paperboard containers and boxes	2.285	67	Radio and TV broadcasting	2.133
26A	Newspapers and periodicals	1.648	68A	Electric services (utilities)	1.668
26B	Other printing and publishing	1.793	68B	Gas production and distribution (utilities)	2.963
27A	Industrial and other chemicals	2.297	68C	Water and sanitary services	1.965
27B	Agricultural fertilizers and chemicals	2.349	69A	Wholesale trade.....	1.596
28	Plastics and synthetic materials	2.370	69B	Retail trade	1.557
29A	Drugs	1.747	70A	Finance	1.724
29B	Cleaning and toilet preparations.....	2.126	70B	Insurance	2.074
30	Paints and allied products	2.162	71A	Owner-occupied dwellings	1.255
31	Petroleum refining and related products	2.988	71B	Real estate and royalties	1.430
32	Rubber and miscellaneous plastics products	2.146	72A	Hotels and lodging places	1.788
33+34	Footwear, leather, and leather products.....	2.645	72B	Personal and repair services (except auto)	1.685
35	Glass and glass products	2.045	73A	Computer and data processing services	1.767
36	Stone and clay products	1.943	73B	Legal, engineering, accounting, and related services	1.547
37	Primary iron and steel manufacturing.....	2.172	73C	Other business and professional services, except medical.....	1.443
38	Primary nonferrous metals manufacturing	2.374	73D	Advertising	1.729
39	Metal containers	2.927	74	Eating and drinking places	2.046
40	Heating, plumbing, and fabricated structural metal products.....	2.089	75	Automotive repair and services	1.895
41	Screw machine products and stampings	2.139	76	Amusements	1.724
42	Other fabricated metal products.....	2.007	77A	Health services.....	1.695
43	Engines and turbines	2.254	77B	Educational and social services, and membership organizations	1.812
44+45	Farm, construction, and mining machinery.....	2.079	78	Federal Government enterprises.....	1.641
46	Materials handling machinery and equipment.....	2.148	79	State and local government enterprises	2.023
47	Metalworking machinery and equipment	1.832	80	Noncomparable imports.....	0.000
48	Special industry machinery and equipment	2.034	81	Scrap, used and secondhand goods	0.000
49	General industrial machinery and equipment	1.943	82	General government industry	1.000
50	Miscellaneous machinery, except electrical.....	1.810	83	Rest of the world adjustment to final uses	0.000
51	Computer and office equipment	2.656	84	Household industry	1.000
			85	Inventory valuation adjustment	1.000

NOTE.—The backward linkage for a commodity represents the total output required from all industries to supply \$1 of final demand for that commodity.
